

Graduate Attributes for WPBL and eWIL

Ubuntu

Demonstrate your understanding of the needs, values, and cultures of people

Our project helps learners in Gugulethu by giving them easy access to educational support. The platform is simple to use, so both learners and parents can use it even if they have little digital experience.

Demonstrate an example of your interpersonal skills

The team communicated regularly through WhatsApp. We listened to each other, respected different opinions, and supported one another in the project.

Demonstrate an example of your interprofessional skills

Each team member had a clear role, such as Agile Lead, Developer, Tester, Analyst, or Product Owner. We worked together across these roles to plan, build, and test the project.

Knowing, Technological Capability & Foresight

Demonstrate an example of how you have used technology and knowledge to effect change in society

We will use web technologies and Agile methods to build a platform that gives learners easier access to educational resources and support. This can improve learner performance and help parents feel more at ease.

Resilience & Problem-Solving Capability

Demonstrate an example of how you confidently engage in solving complex problems in society

The team identified that many learners struggle without structured after-school support. To help solve this problem, we developed a digital platform that provides educational resources and guidance.

Demonstrate an example of your perseverance in the face of obstacles, failures, challenges

The team faced time limits and pressure from other subjects. Even so, we kept improving the project through teamwork, planning, and regular communication.

Demonstrate an example of organisational and financial skills

The project will use free tools such as Trello, WhatsApp, Figma, and development software. We organised tasks using Agile planning so we could meet deadlines without extra cost.

Demonstrate an example of entrepreneurship, innovation, and research

The team researched the challenges faced by learners in Gugulethu who do not have enough supervision and academic support after school. We then developed the idea of a digital platform to support learning and create a safer environment.

Ethical Capability & Respect

Demonstrate an example of how you use your moral values to make ethical decisions

The team communicated respectfully and made sure everyone participated fairly. We will also protect user privacy and handle learner information responsibly when designing the platform.

Demonstrate an example of how you acted on unethical practices

If a team member missed deadlines or did not communicate properly, we discussed the issue respectfully in meetings so the team could find a fair solution early.
